Arc is a state of the art platform that helps collect, manage and benchmark your building data to improve sustainability performance.

Arc is transforming green performance technology and bringing data, mobility and the most disruptive technologies available today to support a holistic approach to building our future. Arc offers a performance solution for every building, community and city, connecting sustainability actions and improvements through a single platform. Arc helps you manage your project’s performance.

**ACCESS REAL-TIME PERFORMANCE DATA:** Use the Arc performance score to help you track your project’s improvements in real time. Watch as you move closer towards LEED® or other green certifications.

**BENCHMARK PROJECTS AGAINST INDUSTRY PEERS:** Leverage comprehensive global data analytics to help you benchmark your project’s performance, and view project ratings on a local and international scale.

**ENJOY THE SIMPLE USER-INTERFACE:** Easy-to-use resource management dashboards and automated control algorithms. The platform also hosts all project assets in a secure storage space.

**SHARE INTERNAL INFORMATION:** Communicate between departments and streamline team management.

The Arc platform is a complement to LEED and other green building rating systems, standards, protocols and guidelines and allows buildings and spaces to connect to the built environment in a new way by comparing performance metrics and connecting them to green building strategies. Arc eliminates complexities and barriers to behavioral change.

LEED-certified buildings can use Arc to improve and benchmark against other certified buildings around them. If your building is not LEED certified, you can use Arc to make improvements in sustainability and human health and take steps toward earning certification.
The Arc Performance Score

Arc calculates a performance score out of 100, based on global building data and action-oriented strategies across five categories:

- Energy
- Water
- Waste
- Transportation
- Human Experience

LEED certification can be earned by meeting a set of requirements listed in Arc, and achieving a performance score of 40 for Certified, 50 for Silver, 60 for Gold and 80 for Platinum.

To get started, register your project at arcskoru.com and start inputting your data. Arc helps you measure and communicate building and portfolio level performance, depending on how many projects you input. Arc will benchmark your project and help you improve over time.

Arc was developed by GBCI®, which is the only certification and credentialing body within the green business and sustainability industry to exclusively administer project certifications and professional credentials and certificates for LEED and other rating systems.
